CHILIAD RECORDS TRIPLE DIGIT LICENSE REVENUE GROWTH; STRONG SALES IN COMMERCIAL AND GOVERNMENT SECTORS FORECASTED FOR 2009

Enterprise Knowledge Discovery Firm Relocates to Washington Beltway Headquarters to Accommodate Growing Demand for its "Connecting the Dots" Technology

HERNDON, VA - (Mar. 2, 2009) - Chiliad, a pioneer in advanced enterprise-class information discovery and knowledge extraction solutions, announced today that it has achieved several internal performance benchmarks for 2008, including a triple digit increase in its software revenue from the previous year. Chiliad's performance increase is attributed to CEO Dan Ferranti, who last year led the transition of Chiliad's patent- pending Discovery/Alert™ software and Global Knowledge Discovery™ technology from use as federal government intelligence and investigatory solution to a broad-based commercial application. This groundbreaking technology has helped the firm attract significant world-renown corporations into deploying Chiliad's "Connect the Dots" capability across distributed and/or disparate data, repositories, and applications. While government officials previously attributed Chiliad with providing "the Holy Grail" of knowledge extraction, all of Chiliad's new business clients are now reporting "amazing" results, " more significant business value than any other solution" , and "near instantaneous return on investment".

Chiliad achieved the following milestones in 2008:

- Commercialization of Chiliad's Discovery/Alert™ software more than doubled Chiliad's existing customer base from the previous year.
- License Revenue increased by more than 300% compared to the previous year.
- Chiliad relocated to Herndon, Virginia, doubling office space in order to accommodate new staff.
- Full-time staff grew by more than 20%.

"Chiliad has proven itself to offer an invaluable solution addressing the utmost critical U.S. Government as well as private sector needs when terabytes and petabytes worth of structured and/or unstructured information spread across multiple departments, applications and environments need to be analyzed, holistically understood and applied within a matter of

seconds," said Dan Ferranti, CEO of Chiliad. "Our growth last year is attributed to the fact that we have the best battlefield tested, operationally proven enterprise knowledge discovery solution in the world- especially when the outcome of the world may depend upon it. We look forward to another successful year as we increase our market share into additional commercial markets. This technology has universal application to any business, commercial, or industrial, use that could benefit from the ability to "connect the dots", or achieve advanced real-time knowledge, situational awareness."

About Chiliad

Chiliad is the world's most advanced provider of inter and intra-enterprise information discovery and knowledge extraction solutions-empowering organizations to actualize upon "Knowledge is Power", thus realizing the full potential business value and actionable intelligence from all data, sources, and applications.

Chiliad's patent-pending software was specifically born out of the need to overcome the information "stovepipe" problem, which was the nation's principal vulnerability on September 11, 2001. Investigations into 9/11 concluded that "Connecting the Dots" across information stored in incompatible databases, documents, and applications, located in different departments and organizations, would provide the proactive, real-time situational awareness necessary to interdict and avert a similar problem in the future. Today, this need not only applies to government investigatory entities but also to all other types of organizations and business applications as well.

A decade of development and \$80 million of investment to solve this problem has led to Chiliad's patent-pending Chiliad Discovery/Alert™ software, and Global Knowledge Fusion™ technology. These provide the real-time capability to securely find, fuse, analyze, monitor, share and act upon information from within the enterprise and across the globe as if it were all seamlessly contained in a single, local, real-time application. Chiliad Discovery/Alert™, is completely non-disruptive and seamlessly complements all existing IT environments, data sources and applications.

The company was founded in 1999 and is based in the Washington D.C area. For more information, please visit www.chiliad.com.
